

**The Leaf Techus** has a very unique feature. It consists of a built-in hood and louvers. This is the most effective gutter cover system in the market.

As water flows off the roof, louvers slow down the flow of water at the first step then at the second step, the built-in hood lets the water flow through invisible holes.

**The Leaf Techus** is the only gutter protection system that offers these two features in one product.

On the Other hand, **The Leaf Techus** Clip design is a kind of water diverter never let dirt from washing down the face of the gutter. This adds to beauty to your home and increases your home value.
