

# Spray Insulation & Roofing Materials

## Build a Healthy Home with Bayer MaterialScience LLC.

A healthy home is the result of a healthy indoor environment: free from pollutants, dust, pollen, water vapor, and mold. The rooms are all maintained at a comfortable temperature, they're free from drafts and cold spots, and there is little noise from the outside.

Bayer MaterialScience manufactures wall insulation that is used in both residential and commercial buildings. Reduce costs with Bayseal Roofing products. We also make roofing foam insulation and a complete line of acrylic and silicone coatings for the roofing foam to create the complete roofing system that reflects heat and insulates the roof, thereby lowering the total cost of heating and cooling your home.

So take a look around our website and see for yourself: Installing Bayer MaterialScience products into your home or building makes energy- and economic sense.

## Spray Polyurethane Foam Applicator Information program at Phoenix, Arizona

This SPFA accredited program for materials and equipment provides participants hands on opportunity to spray foam, learn spraying techniques and maintain spray foam equipment. [Click here](#) or click on the banner below to get the program details.
